

Cushion Cover with invisible Zipper

Materials:

One Cushion Cover:

- 2 - 19" squares of fabric, e.g. quilting cotton
- 2 - 19" squares of woven interfacing
- 1 - 16" invisible zipper
- 1 - 20" pillow insert
- Sewing machine with invisible zipper foot and/or normal zipper foot
- General sewing supplies

Interfacing is not necessary if using a thick fabric like canvas.

Iron interfacing to the back of the fabric according to the manufacturer's instructions.

Overlock or zigzag the edges.

Open the zipper and place it face down on the right side of the fabric. Centre it along the edge that you want the zipper. If you are using a normal zipper foot, unroll the zipper coil with your fingers and press open with a medium hot iron before pinning it. Place the zipper coil in the groove on the invisible zipper foot (see picture) and the zipper foot will unroll the coil and the stitching will be very close to the zipper teeth. Stitch as close as possible with a normal zipper foot. Stitch from top of the zipper to as close as possible to the zipper pull.

Close the zipper and match up the middle point of the other side of the zipper to the middle point of the edge of the second piece of fabric. Stitch as the first side of the zipper but use the other groove on the invisible zipper foot. The invisible zipper is finished.

Close the zipper half way and pin the back and front of the cushions with right sides together. Stitch with a normal zipper foot and a 1/2" seam allowance. Start and end the seam a couple of stitches before the zipper seam ends and begins.

Turn the cushion cover to the right side through the zipper opening and press. Insert the pillow insert through the zipper opening. Close the zipper and you are done!

Your cushion cover is finished, enjoy!
